tech

ActiveMQ, Ansible, Docker, Golang, Java, Kubernetes, Openshift, Python, Relational Databases (Mariadb, PostgreSQL), RESTful Services, Spring

professional interests

distributed systems, system analysis/design, scalability, resiliency, technical leadership

professional dis-interests

GUI/web UI dev, heavy operations workloads (SRE positions)

education

2008-2012 **Bachelor of Science** Computer Science — Clemson University

Focused on software engineering: mobile apps, database design, software engineering, web development

current role

Jun 2024-Present — **Red Hat, Inc** — Raleigh, NC

Principal Software Engineer

Principal engineer on Red Hat OpenShift Dedicated. Build and operate distributed systems for OpenShift cluster lifecycle.

Technologies: Golang, Openshift, Kubernetes, AWS, REST, Postgres, Python

Responsibilities:

- Lead 8 engineers; set roadmap; provide technical guidance and mentorship.
- Plan and deliver customer- and BU-driven features (APIs, automation).
- Own service operations and customer support.
- Integrate OCM with enterprise systems (identity, billing, etc.).

Major Projects:

- Regional OCM re-architecture: designed and delivered a minimal regional deployment to meet data-locality (at rest/in transit) requirements.
- Async message consumer: integrated with a broker to sync data with enterprise systems.
- Deployment architecture redesign: implemented blue/green Kube Deployment for REST service; templated async jobs/consumers for maintainability.
- OCM resilience/DR analysis: documented capabilities, gaps, and limitations for all OCM services.

Nov 2022-Jun 2024 — **Red Hat, Inc** — Raleigh, NC

Senior Software Engineer

Senior engineer on Red Hat OpenShift Dedicated. Built and operated distributed systems for OpenShift cluster lifecycle.

Technologies and responsibilities essentially the same as above minus leadership responsibilities.

personal interests

my dog Jasper, my fiancee Meg, D&D, beer with friends, cooking, sketchy dive bar concerts

favorite band (currently)

King Gizzard and the Lizard Wizard

previous roles

Nov 2021-Nov 2022 **Red Hat, Inc** Raleigh, NC

Senior Site Reliability Engineer

SRE on OpenShift Dedicated; built tooling and software to provision and operate hundreds of customer clusters per SRE.

Technologies: Golang, Openshift, Kubernetes, Prometheus, Grafana, Bash, AWS, Python, Prow CI

Responsibilities:

- Onboarded and mentored engineers and interns.
- Developed and operated Operators, monitoring/alerting, and support tooling.
- Co-lead for planning, architecture, and technical guidance.

Major Projects:

- Intern mentor: delivered CI/CD that auto-provisions OpenShift for Operator integration tests.
- Managed Node Metadata Operator: contributed to a new operator enabling customer machine metadata configuration.

Jan 2018-Nov 2021 **Red Hat, Inc** Raleigh, NC

Senior Software Application Engineer

Senior Java engineer on the Enterprise Services Platform; built shared messaging and REST services and delivered libraries, tools, and patterns to accelerate teams.

Technologies: Spring Boot, Openshift, Docker, Mutual TLS, ActiveMQ, Swagger, Splunk, and most tech from previous role

Responsibilities:

- Developed and operated the broker and REST services.
- SME for messaging (ActiveMQ/JMS), domain model, and enterprise services.
- Authored documentation and standardized libraries and tooling.

Major Projects:

- Modernized legacy stack from VMs/Java 6/JBoss to OpenShift/Java 8/Spring Boot.
- Led ActiveMQ architecture upgrade to achieve horizontal scaling for rapid growth.
- Led a major slice of the monolith-to-microservices database split: designed/implemented changes for a critical app and advised several teams.
- Built operational tooling (Python, Jolokia) to solve otherwise impractical tasks.

Aug 2014-Dec 2017 **Red Hat, Inc** Raleigh, NC

Software Application Engineer

Java engineer on Red Hat IT's ESB team; developed the ESB and company-wide messaging platform (50M msgs/month, 100+ apps).

Technologies: Java, Python, Groovy, Puppet, Ansible, Spring, Oracle, MongoDB, MariaDB, REST, collectd/graphite

Responsibilities:

- Developed and operated the broker and REST services.

quotes

“Baley distrusted overstatement and had no liking for the armchair deducer who discovered certainty rather than probability in the workings of logic.”
- Isaac Asimov, The Naked Sun

”True terror is to wake up one morning and discover that your high school class is running the country.”
- Kurt Vonnegut

- Integrated systems across teams via the ESB.

Jan 2013-Aug 2014 **Premier, Inc** Charlotte, NC
Java Developer
Back-end Java (J2EE) REST services with Spring, Hibernate, Maven, and standard enterprise tooling.

Technologies: Java, Javascript, Spring, Hibernate, JDBC, Maven, JBoss EAP, Git, Postgresql, Oracle

internships

Aug 2012-Dec 2012 **Clemson University Social Media Listening Center** Clemson, SC
Programming Intern
Worked with professors and students to create a tool for downloading large datasets from Salesforce.com
Technologies: C#, Visual Studio 2010, Python, Salesforce.com REST api

May 2012-Aug 2012 **Condrey Corporation** Greenville, SC
Software Development Intern
Worked with business to create proof of concept desktop based data visualization dashboard and mobile admin app
Technologies: C#, Visual Studio 2010, ActionScript, Adobe Flex Framework

honors & certifications

360 Project Team Award 2015

Oracle Certified Associate, Java SE 7 Programmer (1Z0-803) 2014

Premier Team Excellence Award 2014

South Carolina Life/Enhanced Life Scholarship 2008-2012

Eagle Scout 2007
